

Lakshmi Sureshan

Dubai United Arab Emirates • 0971 554899639 • lakshmisureshan@gmail.com

As a passionate Software Developer, I am deeply committed to continuous learning and possess a natural talent for problem-solving and analytical thinking. My experience spans multiple programming languages, enabling me to adeptly convert intricate requirements into efficient, scalable code. I have a proven track record of delivering high quality solutions across the entire software development lifecycle. Staying at the forefront of emerging technologies and industry trends is a priority for me, ensuring that I bring innovative and cutting-edge solutions to every project. I am eager to leverage my analytical prowess and unwavering dedication to learning to make a significant impact in dynamic and challenging software development environments.

EXPERIENCE

Senior Software Engineer | Ace Group FZC | Sharjah | 2017-Present

Inventory Management System (ASP.net - Vb. net, Asp.net Core -C#, ORM, Entity Frame Work Core, SQL Server, Ajax, Angular 18, Javascript, react.js and JQuery).

- Spearheaded the implementation of an advanced Inventory Management Module, incorporating Bill of Materials (BOM), Purchase Requisition (PR), Purchase Order (PO), Goods Receipt Note (GRN), Issue Note, and Issue Return functionalities. Designed and customized the BOM feature, streamlining the assembly process and ensuring accurate tracking of components and finished products. Managed end-to-end procurement processes, from generating Purchase Requisitions to issuing Purchase Orders, optimizing the supply chain for cost-effectiveness and timely delivery. Implemented a robust Goods Receipt Note (GRN) system to facilitate seamless reconciliation of received goods, ensuring accuracy in inventory levels and minimizing discrepancies.
- Introduced an Issue Note system to efficiently manage material consumption, reducing the risk of stock outs and enhancing overall inventory control. Developed and implemented a structured process for handling Issue Returns, ensuring proper documentation and traceability of returned items back into the inventory.
- Collaborated with cross-functional teams, including procurement, logistics, and finance, to enhance communication and streamline operations. Conducted regular audits and analysis of inventory data to identify opportunities for process improvement, resulting in a reduction in excess stock and associated carrying costs.
- Trained team members on the new Inventory Management Module, fostering a culture of efficiency, accuracy, and collaboration within the organization.
- Developed a custom knowledge base using vector embeddings and vector databases to enhance chatbot context awareness and response accuracy.
- Applied Prompt Engineering techniques to optimize input queries, improving accuracy and relevance of AI-generated outputs.

Time Sheet Management System.(Asp.net, vb.net, javascript,jquery)

- Successfully designed and implemented a robust timesheet management system, automating the collection and processing of employee attendance data from raw punching machine inputs.
- Developed algorithms to accurately calculate time in, time out, normal working hours, and overtime, enhancing the precision and efficiency of time-tracking processes.Ensured data quality by implementing rigorous validation checks on the raw punching machine data, minimizing discrepancies and errors in calculated hours.
- Incorporated break and lunchtime considerations into the system, aligning with company policies and providing a comprehensive view of employee attendance. Implemented features to handle holidays, timeoff requests, and deviations from standard working hours, ensuring the system accommodates various organizational needs.
- Designed and integrated a reporting module, offering detailed insights into employee attendance, including regular hours, overtime, and exceptions.

Document Management System

- Spearheaded the development and implementation of a sophisticated Document Management System tailored specifically for the Quality department. Designed and engineered a robust version control mechanism, ensuring precise tracking and management of document versions. This resulted in a streamlined workflow, minimizing errors and ensuring compliance with industry standards.
- Implemented a comprehensive revision control system, allowing for systematic updates and ensuring that all stakeholders have access to the latest and most accurate documentation. Collaborated closely with Quality department stakeholders to understand specific requirements and challenges, translating them into a user-friendly system that met the unique needs of the team.
- Established role-based access control to maintain confidentiality and integrity of sensitive documents, adhering to security best practices and regulatory requirements. Conducted training sessions for Quality department staff to ensure seamless adoption of the new document management system, resulting in increased productivity and reduced learning curve.
- Implemented a secure approval workflow, ensuring that documents undergo a systematic approval process before becoming accessible to end-users. This feature significantly improved data integrity and compliance.
- Engineered role-based access controls, limiting document visibility and download privileges to authorized users based on their roles and responsibilities. This enhanced security measures aligned with confidentiality requirements.

Software Engineer | Feb 2015 –Aug 2016 | Hira Computer Solutions

School Management Software (Asp.net, vb.net, Sql Server)

- Led design and implementation of School Management Module for efficient student data management.
- Developed comprehensive Student Information System (SIS) for tracking attendance and monitoring academic performance.
- Implemented user-friendly grading and assessment module for accurate grade calculations and report card generation.

HR Module (Asp.net, vb.net, Sql Server).

- Developed centralized employee database for HR Module, enhancing accuracy and accessibility of staff information.
- Engineered an efficient leave management system, automating leave request processing and maintaining precise leave balances for employees.
- Led the development of a comprehensive payroll processing module, ensuring accurate calculations and generation of pay slips.
- Implemented a performance evaluation system, facilitating regular reviews and feedback sessions to enhance employee performance.
- Established a training and development module, tracking employee training programs, certifications, and professional growth opportunities.
- Integrated the system with a robust Database Management System (DBMS), employing SQL Server for secure and efficient data storage and retrieval.

Software Engineer | May 2014 –Feb 2015 | Sunshine General Trading LLC.

Supply chain Management System (Windows form Application in vb.net, MS SQL server)

- Engineered and executed a state-of-the-art Supply Chain Management System (SCMS) for a top-tier FMCG company, significantly boosting efficiency and supply chain agility.
- Directed full-cycle SCMS development tailored to FMCG industry specifications.
- Automated demand note creation within the ERP system to capture internal product or service requirements.
- Boosted FMCG supply chain efficiency.
- Automated ERP demand & RFQ processes
- Enhanced supplier quote management.
- Streamlined international logistics.
- Streamlined the procurement process by implementing an automated RFQ generation feature in the ERP system.
- Enhanced supplier engagement and quote management by digitizing the RFQ process.
- **Facilitated precise purchase order generation based on comprehensive RFQ responses within the ERP framework.**
- Optimized invoice matching and processing to ensure financial accuracy and compliance.
- Integrated financial operations for timely and accurate payment execution in alignment with established terms.
- Developed a Bill of Lading module to support international logistics within the ERP system.
- Coordinated shipping and logistics through ERP integration, ensuring real-time tracking and visibility of goods.
- Implemented a goods receipt and inspection protocol within the ERP system to maintain high-quality standards.
- Boosted FMCG supply chain efficiency.
- Automated ERP demand & RFQ processes
- Enhanced supplier quote management.
- Streamlined international logistics.

Software Engineer | June 2013 –May 2014 | Q Renaissance Quality Consultants

Spearheaded in-house ERP enhancement, focusing on Sales and Purchase modules, utilizing PostgreSQL within the Adempire.

Skills

Asp.net Framework • Asp.net Core • Javascript • JQuery • SQL Server • ajax • Flutter with dart • React.js ,

• C# , • vb.net ,AWS basic knowledge,Git

Education

MARCH 2012

Master of Technology in Computer Science and Engineering |MG University| Kerala

2009

Bachelor of Technology in Computer Science and Engineering | MG University | Kerala
